PROJECT REVIEW -2

Date: 20-04-2026

EventHub – Intelligent Ticket Booking System

SDG: SDG 8: Decent Work and Economic Growth

Presented By:

A.Keshava Reddy – VTU26535– 23UECS0662

- Traditional event coordination often suffers from manual booking errors and data inconsistencies.
- EventHub provides a centralized digital platform to automate ticketing and resource management.
- This project is crucial for enhancing transparency and reducing administrative overhead for organizers
- It features a modern Spring Boot backend synchronized with a high-performance React frontend.
- The system offers real-world relevance through its application in festivals, seminars, and workshops.
- A dynamic seat mapping engine ensures efficient venue utilization and prevents overbooking.
- Advanced Admin Dashboards provide real-time insights into event performance and ticket sales.
- Overall, it serves as a comprehensive solution for modern, secure, and streamlined event management.

• PROBLEM STATEMENT

9

- Currently, many event management processes are still handled using manual methods or siloed spreadsheets
- This leads to inconsistencies in attendee data and significant delays in ticket processing.
- Manual seat allocation is often prone to human error, resulting in overbooking or suboptimal venue usage.
- Organizers lack real-time visibility into ticket sales and event metrics across the platform.
- Fragmented systems make it difficult for users to discover and book diverse events seamlessly.
- There is a high risk of ticket duplication and fraud without a centralized digital verification system.
- Communication between organizers and attendees regarding event updates is often slow and inefficient.
- Therefore, a reliable, automated, and centralized system is needed to improve overall performance and accuracy.

OBJECTIVE(S)

The picture can't be displayed.

- **To design and develop** a centralized ticketing platform called "EventHub" that automates event discovery and booking.

- **To implement** a dynamic system that ensures real-time availability and prevents overbooking.

PROPOSED SYSTEM

- Description: A full-stack web application leveraging Spring Boot for the backend and React for a modern, responsive frontend.
- Real-time Booking: Users can instantly browse available events and purchase tickets with live updates..
- Admin Dashboard: Provides powerful management tools for organizers to track sales and monitor attendee lists.
- Centralized Database: Uses H2/SQL to maintain a single source of truth for all events and transaction records.
- Secure Authentication: Features role-based access control to distinguish between attendees and administrators.
- Seamless UI/UX: Designed for a "premium" feel with smooth transitions, dark mode, and mobile-responsive layouts.
- Scalability: The modular architecture allows for the easy addition of new features and event categories.

PROPOSED SYSTEM ARCHITECTURE

Frontend: React.js (v19), Vite, HTML5, CSS.

Backend: Java 17, Spring Boot 3.4.0, Maven, Spring Data JPA (Hibernate).

Database: H2 (High-performance, in-memory/file-based relational database).

Tools: VS Code (IDE), Git (Version Control), Render (Deployment), Vercel (Hosting).

Software Requirements: Windows 10/11, Node.js v20+, Java JDK 17, Modern Web Browser.

Hardware Requirements: 8GB RAM minimum, Intel Core i5 Processor or equivalent, 500MB Free Disk Space.

MODULE DESCRIPTION

9

Module 1: User Authentication & Profiles: Handles secure user registration and login, maintaining persistent sessions and distinguishing between regular users and administrative staff.

Module 2: Transactional Booking Engine: Manages the core business logic for ticket reservations, ensuring real-time seat synchronization and preventing overbooking in the database.

Module 3: Admin Management Console: A dedicated module for platform administrators to create events, update ticket capacities, and monitor global booking statistics.

Module 4:Ticket Management Module: Updates available ticket count after each booking. Prevents overbooking and maintains accurate data.

3
4
5
6
7
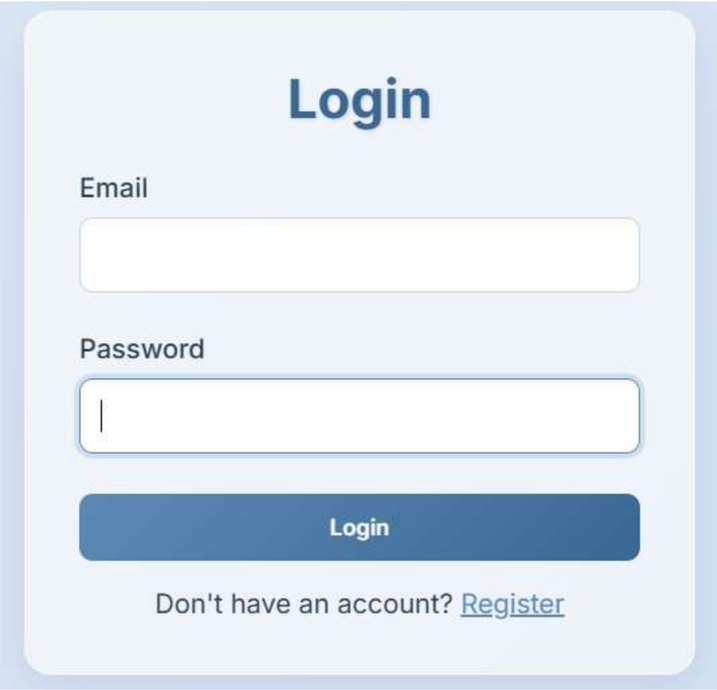
8(A)
9



A secure and modern admin login portal for EventHub, designed with a sky mist theme and authentication interface.
It enables administrators to manage events, user bookings, and platform operations through a centralized control center.

ADVANTAGES

•Complete Automation
•Real-time Synchronization
•Enhanced User Experience
•Centralized Data Management
•High Scalability
•Transparency and Trust

DISADVANTAGES (LIMITATIONS)

•Internet Dependency
•Infrastructure Requirements
•Local Storage Limitations
•Payment Gateway Complexity
•Technical Maintenance
•Learning Curve.
